

# Hotel PBX Platform

Designed to satisfy the growing needs of small and medium hotel telephone systems, the Axeos Hotel PBX edition offers a professional, flexible and easy to use Hotel Communications system at an affordable price. We have created an API for the Hotel Concepts IDPMS Hotel & Resort Management System, allowing data to be passed to and from the phone system.

Some of the features and functions included in this special edition:

## Check in / Check out

To ensure that your guest is only billed for the calls they have made, the VoIP platform can automatically forward calling costs to the Hotel Concepts system.

## Wake up

A guest can set their own wake up call using the phone in their own room. The hotel receptionist can also set a wake up call for any room in the hotel from their desk. Our platform can also play recorded messages to your guest.

## Do Not Disturb

Using this function, a guest can indicate it when they prefer not to be reachable by phone.

## Cutting Costs

The PBX will help you save money on telephone calls with our Least Cost Routing service enabling you to see a greater profit on calls made by guests, while finding the perfect balance between quality and costs.

The AXEOS Hotel PBX edition offers an ideal and affordable platform for hotel telephone systems. With up to 250 extensions the solutions can offer all the facilities expected of hotel telephones.

Currently we support the following hotel software:

Other hotel software API's can be created upon special request. Contact our sales team for more information.
